

Compliance-as-a-Service Platform Designed to Support MSPs

Your MSP clients have cybersecurity regulations to meet. Caetra has a software solution: CyMetric. CyMetric is a risk management tool that automatically aligns an organization's security controls with regulatory requirements and security frameworks.

With CyMetric, you can count on clear identification of compliance or cybersecurity needs tailored to your client's organization, a roadmap for meeting those obligations, and assurance that your client's program will evolve in accordance with the threat landscape and regulatory changes.

CyMetric manages compliance complexity so you can focus on what matters most, growing your managed services practice.

cymetric™

FROM CAETRA CAN HELP:

- Cybersecurity program development and management efficiency
- Extend service offerings into the legal and regulatory realm
- Create long-term engagements to manage and audit cybersecurity programs
